Thermomix TM31 (2004)

Hello! We are going to talk about the Thermomix. It is a home's robot, and it uses to prepare food. It is a small robot and quite intelligent. It is valued and the people usually have got once in their house.

This robot included an integrate balance with maximum speed= 1000 revolutions per minute, and a capacity of 2 litres.

Cooking robot made by a Vorwew German company being able to do different activities such as cutting, mixing, frying, etc.

First of all, it has a bowl of stainless steel with a basis with some buttons to control the food weight and the steps to cook different dishes and recipes, a cover to close the plastic glass. And it has got a motor too.

Furthermore, it was produce to improve and safe time in cooking methods and the people became interested in this. And get better recipes.

You can cook some food faster with it too.

It has been a great invention because we are very busy nowadays, and we haven't got so much time to cook. It makes cooking look easier, relaxing and very fast.

The Thermomix has got a lot of uses, such us:

- Weighting the foods before they cook.
- Mixing ingredients.
- Steaming them, when it is necessary.

In the last few years, they have tried to improve the quality of the materials, invented new accessories and it developed a better performance motor.

Last but not least, in the future we think it could cook all kinds of food. The model could be a digital model, with a touch screen, a list about favourite dishes, and an automatic block.

We think this is very interesting because all human beings need eating and you can cook so many recipes in a very easy way and a short time.
